Tags: [magnet](#) [brush](#) [plateholder](#) [voron](#) [brushholder](#)
[flexplate](#) [poopbucket](#)

All in one solution for nozzle brush, flex plate stop/alignment and poop bucket.

I designed it primarily for use with TAP where the nozzle is barely able to reach brushes since TAP pushes the nozzle forward. So i positioned the brush right on the edge of the bed.

Check the Z distance between the top of your bed and the top of the brush holder. I included both step and Fusion file if you want to change the height if its too high/low. You want it to be just high enough so the flexplate hits it. If it sticks up too much you might run into problem if your scanner hits it.

BOM:

1x Bambu mini clone silicone brush. Available on aliexpress, amazon...

6x 6x3mm neodymium magnets

2x M3 T-nuts/Hammerhead nuts

2x M3x8mm BHCS screw to attach it to the

Installation instructions:

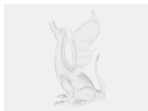

Flame and/or clean the brush area before attaching the brush to make it stick better.

Glue the magnets in place with some super glue
